

Climate Change is Here ... And So Is the Need to Embrace Sustainability in Real Estate

GLOBAL LISTED REAL ASSETS TEAM | OCTOBER 2022

“It is unequivocal that human influence has warmed the atmosphere, ocean and land.” So said the scientists on the United Nations (UN) International Panel on Climate Change (IPCC) in their sixth assessment report released in August 2021.¹ Using their strongest phrasing ever to stress that human actions are responsible, this report heightened the sense of urgency to act on climate change.

Not surprisingly, the real estate industry has been under pressure to focus attention on sustainability. After all, building operations and construction account for approximately 40% of global energy-related CO₂ emissions.²

Morgan Stanley Investment Management’s (MSIM)³ Global Listed Real Assets (GLRA) team⁴ believes environmental, social and governance (ESG) factors and a real estate company’s approach to sustainability will significantly influence its future risk and total return prospects. Given this view, we believe it is imperative to focus on analyzing sustainability factors and integrating these risks and opportunities into an assessment of value.

³ The term MSIM generally includes each registered investment advisor owned by Morgan Stanley. However, unless otherwise noted, references to MSIM do not include Eaton Vance Management, Calvert Research and Management, Atlanta Capital Management Company, or Parametric Portfolio Associates which were acquired by Morgan Stanley on March 1, 2021.

⁴ The Global Listed Real Assets team, part of MSIM’s Real Assets capability group, invests in publicly traded real estate and infrastructure securities. MSIM Real Assets delivers comprehensive real estate and infrastructure solutions to our partners and clients.

Why Investing Sustainably Matters in Real Estate

Climate change is an important factor to consider for the real estate sector.⁵ Existing buildings face chronic and acute physical risks, including intensifying hurricanes, floods and wildfires, as well as economic, social and regulatory changes necessary for decarbonization. To limit the global temperature increase to 1.5°C in this century as required by the Paris Agreement, it has been estimated that real estate’s direct carbon emissions will need to be cut in half by 2030, compared to 2020 levels, and reach net-zero by 2050.⁶

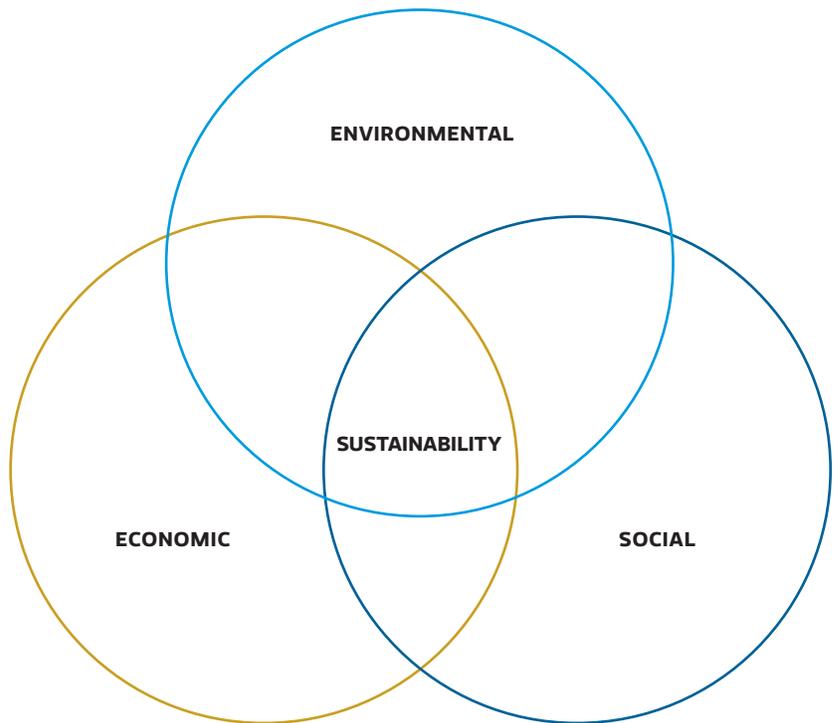

Publicly traded real estate companies hold a significant share of the building stock globally. As such, they are in a unique position to play an important role in achieving global sustainability targets. As public market investors, understanding how companies can influence and achieve net-zero targets is important, as is assessing the financial implications and, importantly, the capital expenditures required to reach such targets.

With 80% of the existing building stock expected to still be in place through 2050, retrofitting the current stock is critical to meeting global net-zero targets.⁷

DISPLAY 1 What Is Sustainability?

In the 1987 Brundtland Commission Report, the United Nations defined sustainable development as “meeting the needs of the present without compromising the ability of future generations to meet their own needs”.⁸ Ultimately, sustainability requires the equilibrium of three core pillars:

- | ENVIRONMENTAL | ECONOMIC | SOCIAL |
|--|---|--|
| <ul style="list-style-type: none"> • Managing the consumption of natural resources and reducing environmental impact to preserve the planet | <ul style="list-style-type: none"> • Using resources efficiently and adopting practices that support long-term economic growth, while also generating operational profit | <ul style="list-style-type: none"> • Balancing the needs of individuals in society to maintain community welfare in the long term, including equal opportunities for employment, health and wellbeing |

⁸ United Nations Brundtland Commission. “Report of the World Commission on Environment and Development: Our Common Future”, April 1987.

Who Is Setting the Priorities for Sustainability?

A confluence of events has led to a rapid increase in the momentum behind sustainability for real estate. This momentum is attributable to three primary constituents: real estate investors, regulators and tenants (see *Display 2*).

REAL ESTATE INVESTORS

The amount of capital directed towards sustainable investing has experienced exponential growth. For example, the UN-convened Net-Zero Asset Owner Alliance (NZAOA), an international group of 74 institutional investors with \$10.6 trillion in assets under management, has committed to transition investment portfolios to net-zero greenhouse gas (GHG) emissions by 2050.⁹

Energy-efficient buildings represent the second biggest use of green bond proceeds.¹⁰ Of the \$290 billion total green bond global issuance in 2020, \$76 billion—more than one quarter—was tagged for green buildings. Banks are also increasing green building construction and mortgage financing.

REGULATORS

As the effects of climate change intensify around the globe, the regulatory landscape is evolving to address and mitigate the worst impacts, with a number of real estate-specific local laws and regulations being adopted in the U.S. and Europe (see *Display 3*).

We are also seeing an even greater global push toward broader ESG regulation, with a particular focus on combating greenwashing.¹¹

DISPLAY 2 Three-Pronged Focus on Sustainability

DISPLAY 3 Select Environmental Regulations

U.S. Building Performance Standards (BPS)	The U.S. BPS Coalition is comprised of 37 state and local governments committed to create and implement BPS in their jurisdictions by 2024. BPS are laws that require buildings to achieve minimum levels of energy or climate performance. ¹²
New York City (NYC) Local Law 97 (LL97)	Requires most buildings over 25,000 square feet to meet new energy efficiency and greenhouse gas emissions limits by 2024, with stricter limits coming into effect in 2030, or face financial penalties. ¹³
California Building Energy Benchmarking	Requires owners of large commercial and multifamily buildings (greater than 50,000 square feet of gross floor area) to annually report whole building energy usage to the California Energy Commission. ¹⁴
French Décret Tertiaire	Requires landlords and tenants of tertiary (i.e., service) sector buildings to reduce energy consumption by 40% by 2030, 50% by 2040 and 60% by 2050 (regulation sets out guidance for defining base year) and to report the energy performance of their buildings annually. ¹⁵
Energy Performance Certificates (EPCs)	Buildings in many European countries are required to hold EPCs, which measure energy efficiency on a scale from A to G. For example, all office buildings greater than 100 square meters in the Netherlands must achieve a minimum EPC rating of C by 2023 and A by 2030. ¹⁶

- **European Union (EU) Sustainable Finance Disclosure Regulation (SFDR)** has two underlying policy objectives: preventing greenwashing and directing capital into sustainable economic activities. These are achieved by introducing specific obligations for asset managers at the entity level and investment product, i.e. fund level.¹⁷
- **EU Taxonomy** is a classification system, establishing a list of environmentally sustainable economic activities. It could play an important role helping the EU scale up sustainable investment and meet the EU's climate and energy targets for 2030.¹⁸
- **In the U.S., the Securities and Exchange Commission** recently proposed three new rules that aim to enhance climate risk related disclosures and/or mitigate risk of greenwashing in the financial industry. If adopted in their current form, these rules would increase regulations on investment advisers and registered funds, while also requiring public companies to disclose climate-related risks and impacts to their businesses, information about climate-related targets, goals and transition plans, and the use of carbon offsets.

TENANTS

Increasing demand from tenants for sustainable buildings is a natural consequence of the growth in climate target setting by corporations.

Employees returning to the workplace after the COVID pandemic have also brought health and wellbeing into sharper focus. This increasing tenant demand and expectation for green and healthy buildings is leading to rental premiums versus the rest of the market. For example, healthy buildings, as deemed by WELL²² and Fitwel²³ certifications, command effective rents that are 5%

to 8% higher per square foot than comparable non-certified buildings.²⁴

How We Integrate ESG into Real Estate Investing

For MSIM's GLRA team, the identification and assessment of risks and opportunities related to sustainability—specifically the Environmental, Social and Governance (ESG) pillars—are a core element of our research process. Our ESG focus is comparable to our focus on other factors such as building quality, tenancy, occupancy, strategic business plans, etc.

Of companies in the Fortune Global 500, 63% have set 2050 emission reduction targets while 42% have set a significant climate milestone—either carbon neutrality, RE100,¹⁹ or a net-zero target—or they have publicly committed to do so by 2030,²⁰ thus continuing to drive the demand for net-zero carbon buildings.

More than half of FTSE 100 companies have a board-level committee focusing on ESG issues.²¹

¹⁷ Article 8 covers financial products promoting environmental or social characteristics. Article 9 covers financial products targeting bespoke sustainable investments as an objective.

²³ Fitwel is a green building certification system that focuses on improving, enhancing and safeguarding the health and wellbeing of tenants and residents in office buildings, multifamily residential buildings and retail space. For more info refer to <https://www.fitwel.org/>.

²⁴ JLL Research. "Return on Sustainability: How the 'Value of Green' Conversation is Growing Up", January 2022.

We undertake a mosaic approach to sustainability research, using both quantitative and qualitative data from multiple sources. The GLRA team's internal research complements and enhances data from company sustainability reports and third-party providers—including MSCI, ISS, Sustainalytics and the Global Sustainability Real Estate Benchmark (GRESB)—and we focus our sustainability research on the areas shown in *Display 4*.

The proprietary research process results in a scorecard that ranks the relative strengths and weaknesses of each company in the investment universe on ESG factors. We then adjust our valuations to account for these ESG risks and opportunities, and the impact they may have on a company's net asset value and cash flow forecasts in both the near and intermediate term; ultimately, we seek to identify the real estate securities with the best total expected returns for our clients, inclusive of adjustments for ESG risks and opportunities.

ONGOING ENGAGEMENT AND ADVOCACY

We conduct engagements with many portfolio companies each year—and often include subject matter experts from MSIM sustainability teams in these discussions. Our constructive dialogue seeks to drive positive change, improve sustainability and enhance long-term value creation.

Complementing these formal ESG engagements are research touchpoints with companies during which ESG factors are discussed.

In addition to ongoing research and company engagements, proxy voting is an important piece of ESG integration, with investment team members playing an

DISPLAY 4

ESG Focus Areas for the Global Listed Real Assets Team

ENVIRONMENTAL

- Energy usage and renewables
- Water usage
- GHG emissions
- Waste reduction and diversion
- Supply chain and materials management
- Tenant engagement
- Climate resilience

SOCIAL

- Health and wellness
- Safety
- Diversity, equity and inclusion
- Workforce and labor management
- Community impact

GOVERNANCE

- Governance structure
- Board diversity and refreshment
- Compensation programs
- Government and regulatory risk
- Business ethics
- Sustainability-linked financing
- Management skill

active role in voting, in line with guidance provided by MSIM's Proxy Voting Policy.

We also leverage our connections in the industry for further collaboration and advocacy. Our involvement includes participation in industry groups and relevant ESG discussions as appropriate including the National Association of Real Estate Investment Managers (NAREIM), National Association of Real Estate Investment Trusts (Nareit), the Real Estate Roundtable and the European Public Real Estate Association (EPRA).

Where We See Sustainability Trends Evolving

- In response to demand from capital allocators and regulators for a rigorous quantitative approach, more ESG data

providers will enter the marketplace—creating their own frameworks to rank the ESG profiles of companies using publicly available information.

- Demand will increase for real estate sustainability benchmarks such as GRESB to compare ESG profiles of similar real estate investments.
- Obsolescence risk will increase substantially for “carbon stranded” buildings unable to achieve greenhouse gas emissions (GHGe) reductions necessary to be aligned with a 1.5°C pathway. This will incur a brown discount, ultimately impairing values and potential total returns.

Predictions for Sustainability in Real Estate

Here are our predictions for sustainability in real estate, based on the recognition that assessing ESG risks and opportunities will have a growing impact on valuations, cash flow projections and total returns:

- Increased demand for green buildings, energy metering and prioritizing health, safety and wellness by tenants will lead to a new capital expenditure cycle for commercial real estate. Property owners that have already made significant investments in these areas will be best positioned to navigate the increasing costs.
- While the growing focus on sustainability is a global trend, there will be regional differences due to existing practices and new or expected regulations that mandate energy efficiency; understanding such nuances will be increasingly important for active real estate investors.
- With the evolving regulatory landscape and reporting requirements, ESG data management and disclosure will continue to increase in importance. This should lead to increased transparency and a better understanding of the risks and opportunities related to ESG.
- Responding to ever-expanding tenant demand for green certified buildings, property owners are likely to adopt new technology to achieve sustainability standards. This will pave the way for increased innovation and a growing differentiation between operating platforms, further separating the winners from the losers.

At MSIM, we seek to integrate sustainability into certain research and investment processes to stay ahead of these trends, as we seek to provide our clients with exposure to real estate securities with the best expected total returns.

RISK WARNING

There are special risk considerations associated with investing in the real estate industry securities such as Real Estate Investment Trusts (REITs) and the securities of companies principally engaged in the real estate industry. These risks include: the cyclical nature of real estate values, risks related to general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses, demographic trends and variations in rental income, changes in zoning laws, casualty or condemnation losses, environmental risks, regulatory limitations on rents, changes in neighborhood values, related party risks, changes in the appeal of properties to tenants, increases in interest rates and other real estate capital market influences. Generally, increases in interest rates will increase the costs of obtaining financing, which could directly and indirectly decrease the value of a strategy investing in the Real Estate Industry.

RISK CONSIDERATIONS

There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market values of securities owned by the portfolio will decline and that the value of portfolio shares may therefore be less than what you paid for them. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this portfolio. Please be aware that this portfolio may be subject to certain additional risks.

There is no guarantee that these objectives/results will be achieved. The views, opinions and forecasts expressed herein are those of the investment team, are not necessarily indicative of those of Morgan Stanley, are subject to change based on market, economic and other conditions, and may not necessarily come to pass. The information presented represents how the investment team generally applies their investment processes under normal market conditions.

IMPORTANT INFORMATION

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the particular Strategy may include securities that may not necessarily track the performance of a particular index. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.

The views and opinions and/or analysis expressed are those of the author or the investment team as of the date of preparation of this material and are subject to change at any time without notice due to market or economic conditions and may not necessarily come to pass. Furthermore, the views will not be updated or otherwise revised to reflect information that subsequently becomes available or circumstances existing, or changes occurring, after the date of publication. The views expressed do not reflect the opinions of all investment personnel at Morgan Stanley Investment Management (MSIM) and its subsidiaries and affiliates (collectively "the Firm"), and may not be reflected in all the strategies and products that the Firm offers.
